

ATTACHMENT

Recommendation:

The Map Library, OOR, should be transferred to OCR.

Objectives of Library Consultants:

To bring all reference facilities of the Agency under a single control, which would (a) enable researchers to go to a single point to request reference material and services and (b) decrease duplication of files and facilities.

Other Advantages:

None.

Recommendation:

25X1A2g

The Foreign Documents Division, [REDACTED] should be transferred to OCR.

Objectives of Library Consultants:

To bring all reference facilities of the Agency under a single control which would (a) enable researchers to go to a single point to request reference material and services and (b) decrease duplication of files and facilities.

Other Advantages:

1. OGI has a strong need for machine processing of the material handled by FDD, in particular of the abstracts of unclassified scientific documents which have been translated by FDD or its contractors. FDD says this is OCR's responsibility and will not provide the service. OCR refuses to process unclassified documentary material, saying that the present hand-system of FDD is satisfactory. Consolidation of FDD under OCR control should enable this problem to be solved.

25X1A2g

2. Because [REDACTED] FDD's functions are so unrelated to other [REDACTED] functions, the [REDACTED] does not recognize the deficiencies of the FDD operation from a reference viewpoint.

25X1A2g

Note: These comments in no way reflect on the excellent attitude of the personnel of [REDACTED] and FDD. They have been most willing to service our requirements and cooperative in every way.
